

COSMETIC FILLER POST-TREATMENT CARE

After your treatment, you might have some redness and swelling. This will normally last less than seven days. Cold Compresses may be used immediately after treatment to reduce swelling. If the inconvenience continues beyond seven days or if other reactions or side effects occur, please contact your physician.

Avoid touching the treated area within six hours following treatment. After that, the area can be gently washed.

Sunbathing and cold outdoor activities should be avoided until any redness or swelling disappear.

If you have previously suffered from facial cold sores, there is a risk that the needle punctures could contribute to a recurrence. Speak to your physician about medications that may minimize a recurrence.

Avoid exercise and alcohol for twenty-four hours after treatment.

BEFORE YOUR NEXT TREATMENT

- Having a follow up treatment before the product has fully dissipated will maintain your refreshed appearance. Please be sure to consult your physician about recommendations for touch-up or follow-up treatments.
- Please Observe the following: one week prior to your next treatment with cosmetic fillers, avoid taking St. John's Wart, High doses of Vitamin E supplements, aspirin, and other non-steroidal anti-inflammatory medications, such as ibuprofen. These agents may increase bruising and bleeding at the injection site.
